
Native classifier runs: 946 study + 4,857 public = 5,803 assemblies

Accession catalogue (Table S01): 1,098 records = 1,074 study + 16 types + 2 outgroups
+ 5 initial exclusions + 1 diagnostic addition.
Catalogue rows are not an analysis denominator.

Reference-removal settings, expert subsets and fragmented derivatives overlap these datasets.
Their classification outcomes are not additional independent genomes.
